KOHLER OF KOHLER

KOHLER OF KOHLER

KOHLER OF KOHLER identifies an institution and a community and suggests their intimate relation one with the other.

Kohler is a planned community, which, under good leadership, the people are building for themselves. It is American in spirit and government. There is something dynamic about the place. There is a fresh, living interest.

The people are for the most part identified with the Kohler Co. The larger number of them have worked together for years. They are possessed not only of high skill, but of a rare spirit of co-operation. They form an organization in the true sense of the word.

A few tasteful changes and the old home is transformed to the highest realization of today's comfort and liveability.

Better Plumbing Fixtures for the Home

IN BUILDING a new home today or modernizing an old one, you are called upon to make many decisions. Possibly that in regard to plumbing fixtures is most important. For of all factors which promote the well-being and comfort of those within, none is so vital as modern, attractive and useful plumbing fixtures.

Plumbing fixtures are of many different types and a knowledge and appreciation of their various features of design, construction and operation is important. It is therefore essential, in making a wise choice, to have information that is right up to date—embracing the many modern improvements which bring new beauty into the home, protect health through efficient operation, and save time and energy by their greater usefulness.

To give such information is the purpose of this booklet. The following pages not only present the utilitarian features to be found in all modern Kohler plumbing fixtures, but afford suggestions for giving the home added interest, added beauty and convenience.

Exquisite bathrooms are illustrated with Kohler fixtures in color. These show the new possibilities for pleasing effects that can be achieved with the use of Kohler colorware. There is real inspiration in these Modern American bathrooms. There is charm of an unusual order.

These color schemes, and many possible variations of them, can be worked out either elaborately or in a simple modest way, for practically all Kohler fixtures are available in color. These Kohler colored fixtures are but little more expensive than white. Since installation and material costs are the same for a bathroom with colorware as for one with fixtures in white, but little is added to the total cost of the home.

The happy faces of healthy growing children reflect the home's sanitary plumbing fixtures.

Press the button and the Kohler Electric Sink washes the dishes quickly and hygienically.

For those who desire the more pretentious fixtures, Kohler has designed the stately paneled Mayfair tub and the gracious Bellaires and Fairfax boudoir lavatories—spirited designs in the modern mood, with fittings chromium plated or in gold, that reveal superb conception and craftsmanship.

Whether pretentious or modest, every Kohler fixture is of one quality, each with the same uniform texture, smooth hardness, and purity of color. All products of iron are coated with the famous enamel developed and perfected by Kohler of Kohler in the years following its founding in 1873. Every vitreous china piece, large or small, has the same indestructible glaze and is twice fired in the latest and most modern tunnel kilns that are available to industry today.

In this book will also be found modern fixtures for the laundry and kitchen. Here, Kohler inventive genius has pioneered in many labor-saving devices. The Kohler Electric Sink-Dishwasher, the Kohler Electric Sink-Clotheswasher, the Electric Clotheswasher, the modern Efficiency Sinks with the remarkable Duostrainer drain, jewel-like Octachrome fittings plated with chromium which preserves their platinum-like lustre from tarnishing and corrosion—these are a few of the epochal achievements of Kohler of Kohler craftsmen.

Modernizing with Kohler of Kohler Fixtures

The plumbing fixtures for an entire home can be supplied by Kohler of Kohler. Throughout its history of more than half a century, the Kohler organization has had one guiding purpose—to manufacture products of unusual excellence. Kohler fixtures vary in size and hence in price, but the materials and workmanship are always the best that research and skill have been able to attain.

The Kohler Clotheswasher combination in color beautifies the laundry and makes the washday more pleasant.

The Kohler Duostrainer, drain control, makes the sink a water retaining basin suitable for many tasks.

The manufacture of Kohler Plumbing Fixtures both enameled and vitreous and of Kohler Plumbing Brass, is concentrated in one great factory at Kohler, Wisconsin. As a result of this concentration, production is carried on under uniform conditions and there is unity and effectiveness of supervision. This, coupled with the thoroughness which is a tradition in the organization, makes possible the uniform quality for which Kohler products have become known.

Since the introduction of color in plumbing fixtures, the importance of securing products manufactured under the closest supervision becomes increasingly important. A most striking property of Kohler colors is their uniformity. Although vitreous china and enameled fixtures are manufactured of different materials under different conditions, the finished ware has a remarkable similarity of appearance, both color and texture.

The careful home builder will also insist on brass fittings that are made by the same company which produces the fixtures he selects. Kohler of Kohler fittings are made of the highest grade brass, wrought by master craftsmen. Mechanically and artistically Kohler brass fittings grace and dignify the fixtures they adorn.

The Bellaires lavatory has all the beauty and grace of fine furniture.

A recent innovation in bath fittings is the Kohler Octachrome line for bath, shower, lavatory and sink. Modern, of octagonal designs, practical, distinctive—these chromium plated fittings approach the ultimate in their jewel-like beauty.

Kohler chromium plating gives to these fittings and other Kohler brass a new enduring beauty. Its soft and lustrous sheen is under ordinary conditions non-tarnishing and permanent. Colors are absorbed and reflected in a manner particularly pleasing when used on colored ware.

No activity in the Kohler organization is more emphasized than research and among its fruits have been such basic developments as the one-piece lavatory,

Flint-gloss, acid-resisting enamel withstands the ravages of strong fruit and vegetable acids.

the one-piece sink, and the one-piece, double-shell built-in bath, in addition to those already mentioned.

One of the more recent of these achievements is Flint-gloss Enamel, an acid-resisting enamel of vitreous-like hardness. It is not affected by fruit acids or alkalis. It will not roughen, stain, or discolor. All fixtures shown in this book may be obtained in Flint-gloss as well as in regular enamel. Flint-gloss enamel is also available in all Kohler colors.

The Utmost in Beauty and Usefulness

In selecting Kohler of Kohler fixtures from this book, therefore, you can be sure that they are the utmost in beauty and usefulness that modern science and industry have been able to produce in a period of over fifty years.

Familiarize yourself with the fixtures shown in this book. For your convenience prices are given. These do not include materials or labor of installation, but will enable you to plan your home and make your selection.

If possible, visit a Kohler showroom. Cities in which Kohler showrooms are maintained are listed on the front page of this book. At these showrooms you can see the actual fixtures and fittings installed as they would be in your own home.

Specification pages illustrating and describing the fixtures you select will be prepared for you in accordance with your architect's or contractor's plan. This service is without charge.

If a Kohler showroom is not convenient, visit your plumber. A great many plumbers have showrooms where Kohler fixtures are installed. Take this book with you and point out the fixtures you have selected from it.

The delicate beauty of this lavatory fitting is typical of Kohler Octachrome brass.

NOTICE

THIS book shows a representative, but by no means complete, line of Kohler Plumbing Fixtures. On each page where fixtures are shown, prices are given. It must be understood that these prices are approximate only. Installation and freight charges have not been figured. However, except for this and for price changes which may occur subsequent to the printing of this book, the prices given herein plus freight and installation costs are about those which you will pay in your plumber's establishment.

The Autumn Brown Mayfair Bathroom

CONTEMPORARY art in architectural design and in decorative treatment is carried out in every detail in this modern bathroom. The Mayfair tub, set in a novel recess, has a panelled side and smart wide rim. The Bellaire lavatory of graceful design is placed in a specially built niche. The shape of the walls and the color scheme of the room and fixtures, too, complete the individuality of this bathroom which Kohler craftsmanship has made possible for you.

The Spring Green Mayfair Bathroom

BEAUTY of design and beauty of color go into this truly modern bathroom. The plumbing fixtures, like the above Mayfair tub and Fairfax lavatory, must be efficient and sanitary, at the same time have a grace of contour, a touch of daring, and an artistic splendor to complete their modernity.

The Horizon Blue Emperor Bathroom

THERE is personality in a colored bathroom, there is warmth, and cheerfulness, and magnificence without ostentation. Kohler Plumbing Fixtures in color, like the Emperor tub and Belmore lavatory shown above, are the keynote. Their soft, delicate shades provide the foundation on which each delightful color scheme is built. Their glistening surfaces, like colored mirrors, reflect a smooth glow of light about the room.

The White Emperor Bathroom

YOUR bathroom is an intimate room, like your boudoir, but different in that nearly every guest in your home sees it. Your bathroom indicates to these guests, friends and strangers, your taste and refinement. Beautiful and practical effects can be achieved in any room when the fixtures are of modern design and skillfully built by master enamelers and potters as are the Kohler Belmore lavatory, Emperor tub, and Rockbourne closet in the bathroom above.

Plans For That Extra Bathroom Utilizing Various Odd Shaped Spaces

THIS evening or in the morning when you have to wait to get into the solitary bathroom, think how your home could be changed to make way for an additional one. It requires neither a large outlay of money nor a large amount of room to provide this necessity which saves time and embarrassment for both family and guests.

The plans on this page will show you how it is done. Simple and economical fixtures have been attractively and practically arranged in small and odd shaped spaces.

Sometimes it's the end of a hall, sometimes a large closet that is used, again an extra bedroom is made into two baths. Waste spaces similar to these are to be found in every home, just waiting to be turned into something desirable and useful.

Your plumber would be glad to assist in selecting the most favorable space. He could give valuable suggestions in the selection and planning of fixtures. He could give an estimate of the cost.

Mayfair Right Corner Pattern K-18-HBO

MODERN in every sense of the word is the new Mayfair tub. From the dainty Octachrome fitting to the straight panelled side of the tub, Kohler designers and engineers have maintained a perfect harmony of detail. The 28 inch wide interior with gently sloping sides and broad flat bottom assure its great comfortableness. Its flat top and smart straight sides with their artful inset panels have an impressive dignity which the pillar-like corner further enhances and glorifies.

The decorative yet efficient Octachrome fittings with their graceful octagonal design and coating of lustrous chromium do their share to complete the picture. Two styles of fittings are here shown; one through the top of the tub, the other through the wall, both exceptionally beautiful.

The Mayfair tub in Flint-gloss enamel, tinted in one of the six Kohler colors or in white or black presents a distinctive fixture for the central object of a tastefully decorated room. In homes of luxurious appointments, it, in combination with the new and magnificent Kohler lavatories, finds a wide appeal. It is made in just one size 5½ feet long.

Remember that the prices given on this page and on all other pages are approximate only and obviously can not include freight or installation charges which will vary from place to place. The prices are for fixtures with fittings as shown; if other fittings are substituted, the price will, of course, change one way or the other.

Mayfair K-21-BGO

Left corner pattern with Octachrome over rim supply. If this fitting is desired for right corner, order K-18-BGO. If left corner tub with fittings through rim is desired, order K-21-HBO.

Dimensions

Width - 36" Height - 17½" Width of rim - 5"

Mayfair Recess With Shower K-22-CJO

HERE, set in a tiled recess, is another pattern of the Mayfair tub. In this installation, also, the straight panelled side, the flat rim, and the spacious interior add a note of massiveness and splendor to the room. It is the true aristocrat of built-in tubs. The tub above has an attractive Octachrome shower fitting of new octagonal design, chromium plated. Two valves control both bath and shower supply, a diverting valve directs the stream to the tub or shower head. Because of its unusually wide and flat bottom, the tub is well suited for use with a shower. It may be had in Flint-gloss or in color.

Mayfair K-23-CKO

K-23-CKO recess tub with left outlet. Octachrome top supply fitting. If left outlet tub with shower is desired, order K-23-CJO; for right outlet tub without shower, order K-22-CKO.

The Mayfair, like all Kohler built-in tubs, sets $\frac{1}{2}$ inch into the floor and has a raised rim at the top which extends into the wall and prevents the seepage of water into the partition behind the tub.

Dimensions

K-22-CKO or K-23-CKO	5 $\frac{1}{2}$ feet	230.25	272.25	272.25	314.25

Imperator Right Corner Pattern K-8-CKO

THERE is a massiveness and dignity about the Imperator tubs that excites admiration. There is a fineness of design that exceeds expectations. The lines curve with a natural freedom. The low sides, the slope end, and the generous proportions of the interior assure the greatest possible bathing comfort.

The Kohler Octachrome fittings shown above are of a modern and artistic octagonal design that lend an additional touch of charm to the bath installation. Below is shown the left corner pattern, and a right and left outlet tub with exposed fittings.

The numbers under each illustration on this and all other pages signify the fixture complete with fittings. To be certain of getting bath complete with fitting desired, the fixture number together with all the letters must be specified. If fittings other than those shown are preferred, they may be specified.

Width - 34" Height - 17½" Width of rim - 4½"

Prices		WHITE ENAMEL		COLORED ENAMEL

Imperator K-9-CN

Right corner pattern—outlet at left end—exposed top supply fitting.

Imperator K-10-CN

Left corner pattern—outlet at right end—exposed top supply fitting.

Imperator K-11-CKO

Identical with K-8-CKO shown above except for left corner.

Imperator Recess with Shower K-12-CJO

THE recess Imperator here shown with wall shower, allows the user to enjoy to the fullest extent the beauty, convenience, and comfort of this modern bath. It is the same beautifully proportioned tub, already described, with the added utility of the refreshing shower bath. The fittings are Octachrome; they may be either gold or chromium plated. The shower curtain is of fine white duck, or of a colored waterproof material, depending upon whether the fixtures are white or colored.

The Imperator tub is also available in a wall pattern with apron on three sides, or in a free-standing type for installation in the center of the room.

Imperator K-13-BGO

Left outlet tub with Octachrome over rim supply. For tub with shower as shown above, order K-13-CJO; for right outlet without shower, order K-12-BGO.

*Price includes china handles and escutcheons. In ordering omit the "Q" from the number.

Viceroy Right Corner Pattern K-26-CK

THE Viceroy, while less massive than the Imperator, has a similar graceful beauty. It is the most favored of all types and makes of tubs. Like other Kohler built-in tubs, it has a raised rim that extends nearly an inch into the wall.

The fitting shown above with supply through the top of the tub is very popular. Below are shown exposed fittings as well as the left corner pattern. These particular fittings have china handles and escutcheons; however, all-metal chromium plated ones, as furnished on colored ware, may be had if desired. The new Octachrome fittings are also available on all Kohler baths. This tub in Flint-gloss enamel has a permanent lustre. In color it will bring additional beauty into your home.

Identical with K-26-CK shown above except that it is for left corner.

Viceroy Right Corner with Shower K-26-CJO

Viceroy
K-29-BJ
K-29-BJ. Left corner pattern with regular shower fitting. For this tub with Octachrome shower, order K-29-CJO; for right corner tub with regular shower fitting, order K-26-BJ.

WHILE tubbathing remains the accepted manner, athletic America is turning to the shower for short invigorating body refreshment. The Viceroy tub, with wall shower, provides both with a minimum expense. The bottom of the tub is wide to assure perfect footing. The sides are low to facilitate entering and exit. Like all Kohler tubs, it is available in Flint-gloss acid-resisting enamel as well as in all Kohler colors.

The fitting shown above has the valves for both shower and bath placed on a chromium plated metal plate, a new and distinctive Kohler Octachrome fitting.

Viceroy Recess Pattern K-30-BG

THE recess pattern is the favorite of many. It blends so well with various decorative arrangements. It is of all patterns the most economical of space.

Especially for redecorating and modernizing your present home, this tub is supreme. It is the one that permits an unused closet, the end of a hallway—in fact, any space as small as five foot square, to be made into an effective, convenient, and beautiful bathroom.

In larger rooms, it helps in producing many unusual and interesting effects, besides conserving space which can be used for more closet room or an alcove toilet.

Viceroy K-31-CK

Left outlet pattern with top supply fittings. For right outlet with top supply, order K-30-CK; for left outlet with over rim supply order K-31-BG.

This tub as shown with over rim supply and china handles, is a very attractive and inexpensive pattern. To the left, this same tub is shown with outlet at left end with top supply fittings. The number under each is the proper one for the tub and fittings.

Consult your plumber if you wish the new octagonal design fittings, Flint-gloss enamel, or colored ware. Specify size.

Besides the corner and recess patterns, the Viceroy is also available in a wall style with enamel on three sides.

Viceroy Recess with Shower K-30-CJ

AN invigorating cold shower in the morning, a reviving hot one at night after a hard day, that's a joy that comes only when you have a shower bath in your home. The installation shown above offers an admirable combination of the built-in bath tub and shower, which consumes no more space than does the tub alone.

The tub is identical with that vastly popular and economical one shown on the previous page, and like the other, has a raised rim built into the wall.

The fittings shown above are of the new Kohler design all-metal chromium plated. All-metal fittings are regularly supplied on colored ware. The smaller illustration shows fittings with china handles and escutcheons such as are supplied on white ware; the metal parts may be either nickel or chromium plated.

Cardinal Right Corner Pattern K-44-CL

THE Cardinal tub opens up to modest homes the road to as complete and efficient a bathroom installation as is enjoyed in the most sumptuously equipped residences. This tub also is built into the floor $\frac{1}{2}$ inch and has a raised rim which extends $\frac{7}{8}$ inch into the wall. The sides of the tub are painted a snowy white to match the fixture, or may be secured all-over enameled if specified. The tub, while inexpensive, is extremely practical, and will give years of satisfactory service. Because of its nearly straight sides and indented base the Cardinal is very popular for nursery use. The right corner pattern with a popular double bath faucet is shown above. Below are shown other patterns.

Width - 29" Dimensions Height - 17 $\frac{1}{2}$ " Width of rim - 3"

Cardinal K-45-DT

Right corner tub with left outlet. Exposed double bath faucet.

Cardinal K-46-DT

Left corner tub with right outlet. Exposed double bath faucet.

Cardinal K-47-CL

Identical with K-44-CL except for left corner installation.

Cardinal Recess with Shower K-48-BJ

THE Cardinal tub illustrated above shows how a most attractive and inviting bath can be installed in a modest manner. Because of its simple lines, the Cardinal is moderately priced and yet it is a built-in tub that is convenient and sanitary. The fitting shown above is a popular shower with a mixing valve for regulating the temperature of the water.

Cardinal K-49-BG

Left outlet pattern with over rim supply. If desired with shower order K-49-BJ; for right outlet tub without shower, order K-48-BG.

The Cardinal can be had with painted exterior or all over enameled. The prices given below are for tubs enameled inside only. The prices on the colored ware, as on all Kohler tubs, include all chromium plated fittings with metal handles and escutcheons.

Patrician with Shower K-54-BJO

The Widest Bath Made

FOR many installations the Patrician is admirably suited. Coated with fine Kohler enamel in white or color and placed in a setting of tile or marble, its unusual width makes it distinctive and impressive. The Patrician has an interior width of $27\frac{1}{4}$ inches. It may be placed in any desired location, in a recess as shown, or in a corner with tile on two sides as well as free-standing or wall pattern. The extremely wide and flat bottom make this tub admirable for sunken pool installations, which are popular in large homes.

The pattern shown above is equipped with an attractive and efficient shower fitting. The flow of hot, cold, or tempered water is controlled by a central mixing valve, separate handles directing it either to the shower head or bath. This fitting is one of the Kohler Octachrome line, with a graceful octagonal design and heavily coated with lustrous chromium. If desired, a fitting of this same design can be furnished gold plated. For left outlet tub order K-55-BJO.

Universal Right Corner Pattern K-60-CK

A WELL proportioned tiled-in tub that is designed to allow for a wide scope in bathroom decoration and manner of installation. The same tub may be installed as a corner pattern, free-standing, or recess. The tub may also be used as a sunken pool type when such is desired. It is truly universal.

The tile, of course, can be of any color, or many colors if desired. Then, to add another variation, the tub itself may be had in one of the seven Kohler colors.

In place of the fittings shown, any of the new Octachrome line can be supplied. The illustration above and the smaller ones below show the Universal tub in various types of installation and with different fittings as well.

Baroness K-86-DS

FOR simply decorated bathrooms where built-in fixtures are not desired, or when the budget is necessarily limited, the Baroness or Colonna here shown are suited. They are both of an attractive design and immensely practical. They are enameled on the inside only, with the same unexcelled enamel used on all Kohler fixtures. It may be either regular or Flint-gloss, acid-resisting enamel. The tubs are shaped for greatest comfort with curving sides, slope end, and broad, flat bottom. The Baroness has a protecting rim around the base to keep dirt from collecting. This tub offers an attractive and worthwhile free-standing installation at a moderate cost. The Colonna is placed on legs sufficiently high

to make cleaning easy. The fittings shown are simple yet efficient, with Kohler renewable parts. The Baroness has a secret drain and overflow; the Colonna is equipped with a connected overflow and chain stay.

While these tubs are generally painted on the outside with either zinc, ivory, or white finish, the Baroness can be had with an enameled base if desired.

Popular Showers of Economical Design

IN many homes, large and small, the need of a shower bath is sorely felt. The younger generation, the boys and girls both growing and grown like a shower, especially for early morning rub downs, or after some exhilarating athletic endeavor. These homes desire and appreciate the shower, but have felt that because their present bathroom installation does not need replacing, that such a convenience is impossible. Above are shown several attractive and worthwhile showers which obliterate this theory. They are showers that can readily be installed above a tub for permanent use. Each is made of the highest grade material and with all the care that has given Kohler combination bath and shower fittings their enviable reputation. To match your other fittings, they may be either nickel or chromium plated. They are here shown with china handles and escutcheons, but they may be of the all metal type or even Octachrome, if desired.

Showers Nos. K-7575, K-7610, and K-7615 are for building into the wall. With nothing but the handle and shower exposed, these fittings, when installed, are as attractive as any shower and bath combination, in fact few could tell that they were extras. The attractive design of the exposed fitting K-7595 and K-7635 make these also desirable additions to any bathroom. The mixing valve on shower K-7575 and K-7595 controls the temperature of the water by means of its one circulating handle; a special volume regulator at the shower head is an added convenience. The other fittings have separate compression valves for the hot and cold water. Shower K-7610 has in addition a shampoo attachment with a long flexible hose and metal perforated nozzle, separate valves control the water to the shampoo.

Fixture	Prices	Nickel Plated	Chromium Plated	All-Metal Chromium Plated

K-7615		13.65	15.70	19.40
K-7635		25.65	30.75	32.60

Kohler Stall Shower K-7565

THE final touch to a fine bathroom is a stall shower in combination with your built-in tub. For the year around enjoyment of the entire family, there is nothing which exceeds it. For the occasional week-end guest, it provides that delightful feeling of pleasure which comes from the knowledge that he can bathe as he most desires, in a full sized tub or in pleasant running water. The shower illustrated above shows a beautiful treatment of a recess tub installed with the Kohler stall shower. The tub is an Emperor K-12-CK recess pattern; the shower consists of a K-7565 shower fitting with overhead shower and nine rose sprays. A mixing valve controls the temperature at the exact point desired. Two control valves allow the shower and sprays to be operated simultaneously or independently. The base is smooth and flat, made of fine Kohler enamel and, like a bathtub, is built into the walls. It has a 2" rim, a 5" apron at the front, and an extra large drain opening. The shower may be either nickel plated with china handles or all metal chromium plated, or Octachrome. The receptor may be regular or Flint-gloss enamel, white or colored.

Prices		Nickel Plated	Chromium Plated	Octachrome

K-105 Receptor	36 x 36	\$71.50	\$89.40	\$89.40	\$106.15

Kohler Deauville Lavatory K-4855

TRULY magnificent is this new Kohler lavatory. A massive slab of the finest polished marble, fittings of graceful mien, legs wrought of shining metal, the bowl of glistening Kohler vitreous china colored to match the marble. Reminiscent of palatial splendor it is, yet modern in every detail. The twice-fired vitreous china bowl fits the marble tightly and permanently; the fittings are sturdy and workmanlike.

A companion piece, the Deauville marble topped dressing table is also available. Both are supplied on special order only, with light or dark marble slab.

Distinguished Fittings

At the left are shown the charming fittings furnished on the new style Kohler lavatories. They are graceful in design, smooth and fast in action, and heavily coated with chromium or gold. The fitting at the top is regularly supplied on the Deauville and Bellaires lavatory, that at the bottom on the Fairfax lavatory. They are, however, interchangeable if desired.

Fixture	Prices	Size	Chromium Plated Fittings	Gold Plating
Deauville Lavatory K-4855		27 x 52 inches	\$1212.00	\$1556.00
Deauville Dressing Table K-4859		27 x 52 inches	823.00	924.00

Kohler Bellaires Lavatory K-4915

AN artistic triumph in vitreous china is the Kohler Bellaires lavatory. A monument to the skill and craftsmanship of the Kohler artisans. The broad, massive slab is cast in one piece. The graceful curving back, the slightly raised shelf, the spacious tablelike end portions and generous bowl combine to give this boudoir lavatory a beauty, utility, and appeal never before approached.

The fittings, like two shining obelisks, are dainty and lovely with their coating of shining gold. Yet they are sturdy, and efficient as well.

The finely sculptured legs are cast of fine metal. They have all the grace found in fine furniture. Placed far apart, they allow the use of a dressing table bench such as is shown in the above illustration.

Fixture	Prices	Size	Fittings	
			Chromium Plated	Gold Plated
Bellaires K-4915		20 x 36 inches	\$540.00	\$700.00
Bellaires K-4915		20 x 36 inches	630.00	790.00
		White Colored		

Kohler Fairfax Lavatory K-4918

KOHLER of Kohler's master craftsmen have artfully combined simplicity and grandeur in the Fairfax lavatory. The long, rectangular slab, the oblong bowl, the gently tapering legs, and cubical fittings have a modern note that builders of fine homes have long awaited. Like the Bellaires, the Fairfax is a dressing table lavatory, designed to allow for the use of a dressing table bench.

The lavatory itself is made in one piece of Kohler vitreous china. Its clear, shining surface, which may be either white, black, or any of the Kohler colors, will never roughen or stain. The fittings, that resemble dainty perfumizers are, in reality, sturdy valves with renewable parts. They, as well as the metal legs, may be either gold or chromium plated.

Standish Lavatory K-5130-FO
(Octachrome Fittings)

Standish Lavatory K-5140-F

Kohler Lavatories in Vitreous China

LIKE pieces of fine table china, Kohler genuine vitreous china lavatories are molded and twice fired, first to make the base hard and fine; the second time to make the entire body of granite-like hardness and to give its surface a smooth, glossy finish. The shining glaze which may be any of the seven Kohler colors, except West Point Gray, is absolutely non-absorbent. It will not stain, scratch, craze, or change color. In white or colors it harmonizes with Kohler enamel.

Chester K-5110-A

Because of this, Kohler vitreous china lavatories are easily cleaned and retain their beauty, sanitation, and usefulness indefinitely. The perfect one-piece construction eliminates every crack and crevice in which dirt might lodge. This construction bestows an appearance of solidarity that dignifies the fixture's design. Pedestal and legs are designed to fit the bowl and join it without any apparent break in the graceful curve.

Standish K-5130-F

The Chester vitreous china lavatory shown above has the spout concealed in the fixture. The flow of water is controlled by the handles, two styles of which are shown, one made entirely of metal, chromium plated, the other with china handles and escutcheons.

The Standish lavatory is shown in two styles, on pedestal, and on leg. In each case the bowl is identical, deep and roomy with anti-splash rim and open overflow. K-5130-FO shows this lavatory with Kohler Octachrome fittings. The other illustrations show regular fittings.

Winthrop Lavatory K-5205-F

Winthrop Lavatory K-5215-P

Vitreous Lavatories on Leg and Hanger

KOHLER vitreous china lavatories, from the largest to the smallest, have certain features of similarity, certain points of superiority. Notice the overflow opening, large and unobstructed, no place there for dirt to lodge and torment the housewife. The lines of the design are simple and impressive, improving appearance and assuring easy cleaning properties.

All Kohler vitreous lavatories have an anti-splash rim to prevent that inconvenient overflow at the front when the water is turned on suddenly. They have a depressed self-draining soap dish conveniently located. And above all, Kohler lavatories are all carefully inspected many times in the process of manufacture. They are straight and true, without a mar or blemish.

Each is carefully taped at the rims to prevent damage during transit and construction.

Standish K-5150-J

Winthrop K-5205-J

The three shown on this page, the Standish on concealed hangers, the Winthrop on leg and on concealed hangers are all popular models. They are all of similar size and design, except for the four-inch back on the Winthrop models. The fittings shown are all of the Kohler interchangeable type with renewable wearing parts. The handles and escutcheons may be either pure white china to match the fixture, or lustrous chromium plated. From the central spout of the combination fitting a stream of hot, cold, or tempered water is delivered well out into the middle of the lavatory. Washing in running water is a pleasurable convenience in these Kohler lavatories.

Small and Economical Vitreous China Lavatories

THE vitreous china lavatories shown on this page are in all respects equal to the larger ones shown on the preceding pages. There is only one quality of Kohler vitreous china. In design, these fixtures are less ostentatious. They find their place in smaller but equally fine bathrooms—for that extra bathroom, which you are, no doubt, planning.

The Malden, except for the rounding front, resembles the Winthrop, already shown, very closely. It is here shown with compression faucets and lift drain fittings. The fittings may be either nickel or chromium plated, as desired. Notice the convenient and self-draining soap dish that is cut in the slab of the Malden lavatory. It can also be used as a tumbler holder.

The Brewster is for corner installation. This complete and sanitary model is very convenient for installation where space is limited, for small bathrooms, bedrooms, and alcoves. It is here shown with two compression valves and a rubber stopper.

The Lexington is an attractive bowl of narrow dimension for use where space is limited. For all its narrowness, it has an attractive appearance and an oval bowl of unexpected roominess. The compression faucets and chain stay may be either chromium or nickel plated. This fixture, like all Kohler vitreous china, may be had in white, black, or colored.

Arlington K 5500-F

Wabash K-951-F

Distinctive Drinking Fountains— of Vitreous China

KOHLER drinking fountains have in addition to their excellent construction and efficient fittings, the undeniable superiority of being available in color. In public buildings, schools, churches, and homes, a drinking fountain in color is not only useful and desirable, but ornamental as well.

Kohler vitreous china drinking fountains are made of the same high quality, sanitary non-absorbent china, as are Kohler lavatories. The Arlington as shown with a graceful hexagonal vitreous china pedestal has a Kohler stream jet supply of unexcelled sanitary design. The Concord is a wall fountain with a lever controlled bubbler supply. The fittings may be chromium or nickel plated.

Concord K-5550-G

Enameled Drinking Fountains

Kohler enameled iron drinking fountains, are made in the same general style and with the same superior fittings as are the vitreous china ones. When Flint-gloss enamel is used, the basin will not become stained or roughened by the continuous action of the water. Two styles are shown here, the Wabash and Crystal, with fittings which may be either chromium or nickel plated.

Enameled Lavatories of Beauty

FITTING companions to the vitreous china lavatories are the Kohler enameled iron ones. Large and small, they are artistic and efficient. Years ago Kohler of Kohler pioneered the manufacture of one piece all-over enameled lavatories. Since that time Kohler lavatories have been undisputed leaders in beauty, and sanitary cleanliness. The enamel may be Flint-gloss, the new acid and alkali resisting enamel that is remarkably hard and will not roughen or discolor, that is so easy to keep clean. Either regular or Flint-gloss enamel may be furnished in any of the seven Kohler colors.

Filmore K-141-F

Belmore K-145-J

Stanmore K-161-J

Lavatories like the three shown here will be found in the finest homes. The tops are broad and smooth, making a shelf for combs and brushes. The oval basins are deep, roomy and fast draining. There are no corners or crevices that are difficult to clean.

The Belmore and Stanmore lavatories are shown with two fittings. One, a combination fitting with two compression valves and a central mixing spout with a Kohler lift drain. The other fitting has two compression faucets with a central lift drain. They are all shown with china handles and escutcheons. The metal may be either nickel or chromium plated. This fitting may also be had in the Octachrome style as shown on some of the vitreous lavatories, or of all-metal as shown on the Filmore above and furnished regularly in colored ware.

Pleasing Small Lavatories

FOR small and economical bathrooms these lavatories of simple design are shown. Each however, is made with all the care and of the same materials that go into the most expensive enameled fixtures. Each is shown with compression faucets which are of new Kohler design with renewable wearing parts.

The Osborne has been designed for use where space or arrangement demand that the lavatory be placed in a corner. The bowl is of the same size and shape as those used in other and larger lavatories.

The Clare, Kennedy, and Midget are roll rim lavatories for use especially where very economical ones are demanded. They are widely used in summer cottages, and for basement, kitchen, and bedroom lavatories. The Clare is a regular size lavatory. The Kennedy, like the Osborne, is for corner installation, while the Midget, as its name implies, and the dimensions below indicate, is small indeed.

In many bathrooms where space permits will be found the Dental lavatory. This lavatory offers utmost sanitation and convenience by providing a private basin for cleaning of teeth and for securing drinking water. The single faucet directs the water out into the center of the basin. The tumbler rests in a depressed holder.

Kohler Brass Fittings

KOHLER brass fittings for lavatory, bath tub, and sink have been made so that the same perfection of operation and design which exists in all Kohler fixtures can now be assured in every detail. Fine fixtures alone do not guarantee satisfaction. Fine fittings as well are needed. Be sure that every fixture and fitting that goes into your home bears the name "Kohler."

A few of the distinctive fittings produced by Kohler are shown on this page. Above are various bath and lavatory fittings in the new Octachrome style. Note the attractive design and lustrous chromium plating. At the left is shown the new Octachrome Rapidrain bath fitting which fits into the overflow. Below that is the Octachrome lavatory lift drain. This fitting operating through its special actuating lever allows the drain to close tightly and open to any desired position with an easy motion.

Below are shown two lavatory compression faucets and a combination lavatory fitting. These cross-section pictures show how sturdily all Kohler brass is manufactured and how easily the wearing parts in Kohler faucets can be renewed.

K-7406

Kohler Rapidrain fitting with lever lift through overflow inside of the tub and an unusually large drain opening.

K-7448

Kohler Lavatory Lift Drain with Patented Spring Adjustment which assures quick, positive action.

K-8067

The insides of the above faucets can be removed and replaced any time that it is desired.

K-8065

K-8002

Kohler Combination Lavatory Fitting can be changed from Compression Unit to Self-closing or vice versa in the same manner as the faucet illustrated at the left.

The Proper Closet Combination For Your Home

FROM the day it is installed, the Kohler water closet in your home plays an important part in maintaining the health of the family. By its design and action it not only disposes of waste in a most sanitary manner, but also aids in the formation of proper health habits, especially in homes where there are children.

Sanitary Vitreous China

In the first place, Kohler of Kohler closet bowls are made of genuine twice-fired vitreous china of the very finest quality. This means they are all of granite-like hardness; from the large Rockbourne to the economical Dorking, they are the same. Fine hair-like cracks, crazes they are called, which collect dirt and become odoriferous, will not appear in Kohler bowls. Their smooth surfaces will never stain or roughen. Kohler vitreous china is permanently beautiful and easily cleaned.

Exceed Government Specifications

In the manufacture of water closets, the United States Bureau of Standards has laid down certain requirements that should be met. Kohler of Kohler goes beyond these, and in every particular Kohler closets meet all government specifications and exceed most.

The water seal in Kohler closet bowls is in every model deeper than is required. This prevents any sewer odor from carrying back into the house. It means more than that. The extra depth makes the water in the bowl that much deeper bringing it up further on the sides, making the water area larger.

The water area in all Kohler closets is exceptionally large. The space under the seat opening is adequately covered with water. Soiling of the side walls is minimized, and a thorough washing takes place at every flushing. Complete cleanliness at all times, therefore, becomes another attribute of Kohler closet bowls.

As a closet is flushed, the waste is carried by the force of the water through the passageway into the sewer. In all Kohler closets these passageways are generously large.

Powerful Jet Action

The forceful action of a closet is dependent upon the quickness and efficiency with which the syphonic action is started and maintained. In the highest grade bowls there is a jet so placed as to send a stream of water up into the passageway and help this action. In all Kohler bowls there is such a jet. As the pages of this book will show, even the least expensive

Unexcelled Construction and Action

1. Straight waterways to rapid acting jet.
2. Extra wide passageways.
3. Strong flow of water from rim.
4. Large water area and deep seal.

Kohler bowl has this feature, usually found only on expensive styles. These streams of water are powerful, making action fast and thorough. The water passages to these jets are straight and smooth. Their action is, therefore, unusually quiet.

In Kohler closets, the action of the jet is supplemented by streams of water from the rim of the bowl. This water, coming in from large and evenly spaced holes, rushes like a torrent down the sides and over the bottom of the bowl, which is so shaped without recess or crevice that every portion of the interior is thoroughly washed and scoured.

Efficient Tank Fittings

Aside from the construction of the bowl, the tank and its fittings are an important part of any closet combination. The fittings especially, for they are the only moving part. Kohler tanks are full rated size and capacity, assuring a copious supply of water at every flushing. The fittings are the best that modern sanitary engineers have been able to devise. The double action lever, large flush pipe, solderless float, and special ball cock make action rapid, certain, and quiet.

Rapid Noiseless Action

1. Quick acting lever.
2. Special design ball cock eliminates noise.
3. Large solderless metal float.
4. Hard rubber valve with renewable leather washer.

Comfortable, Healthful Seat

The closet seat, as well as the sanitary cleanliness of the bowl, is a factor in promoting proper health habits. The old style seat was poorly shaped, and uncomfortable, encouraging haste. Kohler seats are correctly designed; they are permanently smooth and non-absorbent. They not only are easy to clean and sanitary, but comfortable. They encourage regularity and leisure.

Grace and Beauty in Design

In appearance, Kohler closet combinations maintain the fineness which characterizes all Kohler fixtures. The bowls are massive, both in appearance and reality. The sides curve in gracefully to meet the trim lines of the base. Pro-

Sanitary Attractive Design

1. Smooth side walls.
2. Extended lip.
3. No projecting rim.
4. Graceful curving front.

jecting ledges or beads have been eliminated to improve both looks and cleanliness. The tanks are well designed and fit the wall snugly and true. The whole combination may be had in any of the beautiful Kohler colors to match the other fixtures in the room.

Kohler vitreous china closet combinations, like other Kohler vitreous china fixtures, are made in a large modern pottery at Kohler. Here every part is carefully inspected at every stage of manufacture. And, when completed, the bowl is tested, under water pressure, to assure its satisfactory operation in the home.

Rockbourne Syphon Jet Closet K-5870

THE Kohler Rockbourne is one of the most efficient, sanitary, and satisfactory closet combinations that is offered to the public today. The bowl is massive in design and construction. The tank is large and well proportioned. The whole combination is made of vitreous china and fits together as a unit. There are no exposed metal parts. It may be had in white, black, or colors.

The action of the Rockbourne is rapid, thorough, and quiet. A powerful jet of water shoots up the extra large passageway, creating a powerful syphonic action that carries with it all waste material. At the same time, a rapid flow of water enters the bowl from the rim, cleansing every spot of it thoroughly.

The bowl is shaped for utmost sanitation. The walls are nearly perpendicular. The water area is exceptionally large, covering the entire area of the bowl. The front is extended and the seat is open, providing greater comfort and protection against soiling. This is especially valuable where there are children.

Cross section of Rockbourne Master Syphon Jet bowl showing forceful action, large water area and wide passageways.

The Kohler Rockbourne, while providing the maximum in beauty, comfort, sanitation, and perfect action, takes up no more space than an ordinary closet.

All Kohler syphon jet closets can be completely drained so as to remove all possibility of freezing in a closed up home.

Prices	WHITE	COLORED
	Nickel Plated Fittings	Chromium Plated Fittings
Fixture		
Rockbourne K-5870	\$100.00	\$142.35

Devon Syphon Jet Closet K-5908

THE Devon, while slightly less massive, both in fact and appearance than the Rockbourne, has practically all the desirable features of action and sanitation. It, too, is a syphon jet closet, served by a twin supply jet that makes action fast, efficient, and quiet. Like the Rockbourne, the water area, passageway, and water seal all exceed the government requirement for this type of bowl.

The Devon comes both with extended lip as shown above or with rounded front. It extends twenty-nine inches from the wall with lip and twenty-seven inches without.

The Devon, like all Kohler closets, may be supplied with an efficient flush valve in place of the tank, if specified.

It may be had in white or colors. The seat on this and other Kohler closet combinations in color has the new Pearl finish in one of the seven colors as shown on page 46.

Devon K-5924-A	47.70	48.90	81.30

Selkirk Closet Combination K-5968

THE Selkirk reverse trap closet is an inexpensive closet with many features of design and construction usually associated only with expensive bowls. Like the Rockbourne and Devon, it has a powerful jet directed into the water channel to start and maintain the syphonic action. An equally strong flow of water comes in from the rim to thoroughly flush the bowl.

The water area is ample, being much larger than the average for this type closet. The dam is unusually high. The large passageway assures reliable operation.

The Selkirk is available both with extended lip and with rounded front, and with either a flush valve, as shown at the right or vitreous china tank as shown above.

Selkirk Closet K-5736. With rounded front. Side supply flush valve assures rapid quiet action.

Dorking Closet Combination K-6042-A

With round front and vitreous china tank

THE Dorking is an economical washdown closet, exceptionally well designed and with many points of excellency. Like other Kohler bowls, it has a concealed jet directed up into the water passage. This is a feature very seldom found in washdown closets, but one which, in keeping with Kohler standards, makes the Dorking equal in sanitation and perfect action to many larger and more expensive fixtures. The Dorking is so constructed that the water area is generously large to provide maximum protection against fouling.

The Bidet K-6820

The Bidet while comparatively new to American homes has, for years, been considered indispensable for personal hygiene in Europe and Latin America. It is made of non-absorbent vitreous china and designed to provide a rectal or vaginal douche in the most convenient and sanitary manner possible. The bidet can be used either as a douche or as a still bath. It also has a nozzle jet to which a rubber tube for a hand douche can be attached.

Color for Closet Seats

KOHLER closet seats are available in the bright pleasing wavy Pearl finish colors shown above. They harmonize with the colors of Kohler closet bowls and make possible the pleasing ensembles illustrated elsewhere in this book.

The finish and colors are permanent. The glossy covering will not crack, check, or peel, and is easily kept clean.

Desirable Lavatory Benches

One of the finishing touches of the really delightful bathroom is a graceful and desirable lavatory bench. The Kohler bench, with legs shaped to match the Bellaires, Fairfax, or Deauville lavatory, is made by master cabinet makers and delicately colored to match the fixtures or walls.

Sanitary and Hygienic White Seats

LEISURE, physicians tell us, is one of the cardinal requisites for healthful habits of personal hygiene. The closet seat by its shape, its smoothness, its cleanliness either promotes or destroys this desire for leisure.

Kohler closet seats are made of the highest grade hard wood, skillfully and carefully shaped, and covered over with a smooth, hard impervious material. This covering, which is put on in sheet form and molded under steam pressure, is absolutely non-absorbent; therefore, dampness can not penetrate it. It will not roughen or stain. There are no pores or crevices in which bacteria-laden dirt can collect; it can be cleaned by wiping with a damp cloth.

As was explained on the previous page, these seats can be in color if desired in addition to plain white. On this page are many popular seat styles, your plumber can show you others. Prices for colored seats, or for mahogany or golden oak seats will be furnished on request.

Bathroom Accessories

THE accessories in a bathroom are the niceties which complete its usefulness. Kohler accessories for the bathroom are made in two styles, vitreous china and all-metal chromium plated. The vitreous china accessories are made to fit snugly into the wall. They may be colored to match the fixtures. The chromium plated accessories are of an attractive exposed design. They are so constructed that they may be easily and quickly installed after a bathroom is completely built.

Kohler Electric Sink—Dishwasher for the Kitchen

AS a pleasant meal draws to a close, are you faced with that drudgesome and never ceasing task of dishwashing or are you of that group which will have the dishes washed for them electrically?

The Kohler Electric Sink-Dishwasher is a regular kitchen sink with all of the advantageous features, including the Kohler Duostrainer. In addition, it has the electrical dishwashing compartment in which a thousand stinging jets of water are constantly being hurled against the dishes, washing them specklessly, spotlessly clean.

The dishwasher mechanism consists of a perforated cylinder placed over a spiral impeller shaft which is directly connected to $\frac{1}{4}$ H.P. motor. There are no exposed moving parts; there is no intricate mechanism to learn to operate. You place the dishes in the basket specially designed for them, put in water from the sink faucet, and then press a button. As the dishes do not move in the washer, there is no danger of breaking even the most fragile.

Phantom view of Dishwasher in action. Note the simple construction and the way which the stinging jets of water rush out from the central spray tower.

Electric Sink—Dishwasher K-1050-RA

THE Kohler Electric Sink shown above is in reality three sinks in one. There is an Electric Sink dishwasher at one end, a large utility sink at the other, and in between, an 8" deep regular sink compartment, all Duostrainer equipped. The two plated metal covers serve as spacious drain-boards. The sink is furnished complete as shown with swing arm containers under the sink. As will be noted, it has an 8" back and an 8" apron. Order K-1050-LA for sink with dishwasher compartment at left end.

Electric Sink—Dishwasher K-1100-RA

above, but, nevertheless, it is a large fixture with a roomy sink and large drainboard. Its length is 60" and width 23". This is a very popular model, offering as it does complete kitchen service. K-1100-LA is for sink complete with dishwasher compartment at left end.

Electric Sink K-1100-RA is somewhat smaller than the one shown

The wringer is easily removable

The Kohler Electric Sink—Clotheswasher

EVERY day there are a few things that you would like to wash out—some hosiery, lingerie, or baby clothes, too few or too delicate for the washing machine in the basement. Think, then, how convenient this new Electric Sink—Clotheswasher will be, a clotheswasher built right into your kitchen sink. One that is filled from the sink faucet and drained by the lifting of a lever. The inside of the tub is coated with the same smooth, hard enamel as the outside. There is no roughness that could possibly harm the most fragile garment. The agitator is of smooth aluminum and of new design. It washes the clothes gently and thoroughly, rolling them over and over as the cleansing water is swished back and forth through them.

Phantom view of Sink-Clotheswasher, showing new agitator design, smooth enameled interior and Duostrainer in sink compartment.

The mechanism consists of a six vane agitator, a gear box in which the gears run in oil, and a $\frac{1}{4}$ H.P. motor. An occasional oiling is all the attention it requires. The action is exceptionally quiet. A special wringer that clamps to the side of the sink, is available if desired.

Electric Sink—Clotheswasher K-1128-RA

THE Electric Sink K-1128-RA shown above is a most popular model of clotheswasher sink. It has the eight inch back, sink, and apron feature. The hinged metal cover serves as a drainboard.

These features, in addition to the efficient, electrically driven clotheswasher with its smooth, quiet action, make this sink unusually attractive to housewives. The wringer illustrated below further increases the usefulness of this sink. For clotheswasher at left end, order K-1128-LA.

Electric Sink—Clotheswasher K-1130-LA

ers other than those shown are desired, consult your plumber, who will show you the complete line in his large Kohler catalog. The detachable wringer of improved design can be had by ordering K-1145.

The Electric Sink K-1130-LA is another clotheswasher sink. This one has a large enameled drainboard.

Kohler Efficiency Sinks for the Modern Kitchen

"BEAUTIFUL" you may say of the new Kohler Sink, pictured above. Beautiful it is, and utilitarian, just as is any Kohler Sink, large or small, that you may select for your kitchen. In every detail Kohler Sinks represent the ultimate desire of home managers, anticipating as they do the housewife's every need.

They have the charm of color. Like the bathrooms already shown, your kitchen can also take on a new aspect of brilliance. With the glistening enamel of the sink tinted to match the color note of the room, the room becomes brighter, the work becomes easier.

With the sink in Flint-gloss, the beauty is truly permanent. This wonderful new enamel is both acid and alkali resisting; even during canning season you need never fear that the abundance of fruit and vegetable juices will stain your sink. You can use any cleaning compound you wish without danger of roughening the enamel.

The most outstanding and revolutionary point of Kohler Sinks, however, is the Duostrainer. This is a radically new drain control that allows you to fill your sink with water. You can use your sink for washing dishes and vegetables, for laundrying and many other utility purposes without the use of a pan of any kind.

Kohler Hand Duostrainer in open position, showing large drain opening and removable strainer cup which collects debris.

A Kohler Duostrainer converts the sink into a water containing basin suitable for washing dishes and other uses.

When the drain is opened, the water empties rapidly. All debris is washed into the large strainer cup, which is conveniently removed for emptying. This device can be either hand or lever operated, as shown.

Notice how simply the Duostrainer is constructed. There are no ridges or recesses to catch dirt. The sides of the strainer cup are straight. The drain opening is exceptionally large and unobstructed. The water goes out with a rush causing a self scouring action which keeps drain pipes open.

There are many other features that elevate the Kohler fixtures to a new height of efficiency. The swing arm containers shown at the left are for utensils and garbage. They are right at the housewife's finger tips whenever wanted. Back out of the way when not in use. They are easy to keep clean, for they are made of vitreous china. The covers are plated brass. The brackets on which they are hung are very substantial.

Of course, these new sinks are made with the eight inch low back that allows them to be placed under large full windows, so that the light can come in right where you want it, over the sink. Together with the eight inch back, the eight inch apron, or front, gives these sinks a graceful, massive appearance. That is not all. The sink itself is eight inches deep. There is a roominess to these sinks, which when combined with the Duostrainer, increases their usefulness manifold.

Two swing arm containers, one for garbage, the other for utensils, fit snugly under the sink ready for instant use.

Kohler Lever Duostrainer in open position. The direct acting lever in the back of the sink controls the stopper

Faucets of New Design and Utility

K-7456

OCTACHROME fittings add the finishing touch of distinctiveness to Kohler Sinks. Their attractive octagonal design is new and modern. They are chromium plated, which gives them a platinum-like lustrous finish which will not rust, tarnish, or corrode. In every respect they match the elegance and quality of the Kohler fixture on which they are placed.

And as the life of any valve is dependent upon its interior wearing parts, all Kohler faucets are constructed so that these parts may be easily and quickly replaced whenever they become worn. The faucets also have a new anti-splash device, which causes the water to run from them in a smooth even stream.

The K-7456 faucet has the valves concealed behind the back of the sink, with the handles extending through. This arrangement not only offers a faucet which is different, but one which, fitting close to the back, gives added room in the sink. It also has a third faucet for soft water. K-7460, not shown, is identical to K-7456 except that it has two valves. Both types may be had with either a six or nine inch spout, either with a hose or without.

K-8665 is also one of the new Octachrome fittings. This type is an exposed fitting, with lever handles. It, as well as the other, may be had with a vitreous china or all metal chromium plated soap dish. It may also be had with rinsing hose if desired.

If a less expensive faucet but one which has the advantages of a rinsing hose and a swing spout mixing faucet is desired, No. K-8673, or K-8678, not shown, chromium plated faucets, may be supplied.

Chromium plated Soap dish can be had on all faucets at \$2.10 extra.

Bellevue K-1240-RM

THIS is a straight eight double compartment sink, with one large and one small compartment. Each compartment has a Duostrainer so that it retains water. A sequence of operations, such as washing and rinsing, or soaking and scrubbing, can be performed with maximum efficiency to meet the needs and convenience of any home. For sink complete as shown, but with large compartment at left end, order K-1240-LM.

While all of these sinks are shown on concealed hangers, enameled adjustable legs will be provided when specified.

Bristol K-1275-M

Bristol K-1275-M

Another straight eight sink is this which, because of its attractive design, efficiency, and all around utility, is rapidly becoming one of America's most popular sinks. It has two drainboards in place of two sinks. The sink compartment is unusually large and the drainboards provide capacious working space that is usually found only in tiled-in kitchens.

K-7462

This through-the-back fitting either with or without hose can be had on all Kohler sinks.

K-8673 Nickel Plated faucet may be had if specified. See page 56.
If desired without swing arm containers deduct: White \$31.50; Colored \$32.60.

Stanton K-1280-RM

TWO more new straight eight sinks of universal interest are here shown. They are both of the very latest design with eight inch sink, back, and apron. The longswing spout mixing faucet is chromium plated, as is the spray nozzle of the long rinsing hose, and the drain and trap. Each has two vitreous china containers, one for garbage and one for utensils, both hung on sturdy brackets under the sink. Each has a Duostrainer. They may be had in Flint-gloss enamel or color. Enameled adjustable legs will be supplied if specified.

Newport K-1285-LM

The Stanton, K-1280-RM, shown above, is admirable for installation under large full windows. It is made in two sizes. For sink at left end, order K-1280-LM.

The Newport, K-1285-LM is for left corner installation. It is made in one size only. For right corner installation order K-1285-RM.

Newport K-1285-LM

(PATENT APPLIED FOR)

The Kohler Hand Duo-strainer literally trebles the usefulness of the kitchen sink.

Guilford K-1295-RM

THE Guilford, K-1295-RM, is another straight eight sink of wide appeal. It, like those shown previously, has an Octachrome mixing faucet, swing arm containers, and is Duostrainer equipped. This model is for recess installation. With its large sink and spacious drainboard, this sink proves unusually valuable where there is need to conserve space. It is made in but one size. For sink compartment at left end order K-1295-LM.

Winton K-1300-M

Winton K-1300-M

For the small kitchenette or where an extra utility sink is required, the Winton is demanded. It has the eight inch back, apron, and sink. It is equipped with the Kohler Duostrainer and with an Octachrome swing spout mixing faucet. Below the sink is a large vitreous china garbage container.

Priscilla K-1500-M

KOHLER 12" back sinks have, in an economical manner, many of the advantages of the Efficiency Sinks. They all have the Duostrainer. They have the attractive Octachrome mixing faucet with its long swing spout. They, too, may be had in color and in Flint-gloss, the new acid-resisting enamel. The Priscilla, shown above, is a large double drainboard sink that is made in three sizes as indicated below. These sinks may be had on enameled adjustable legs if desired and also with the vitreous china swing arm containers.

Puritan K-1520-RM

Puritan K-1520-RM

Another 12" back sink in wide demand is this single drainboard Puritan sink. It, too, shows many of the advantageous features of the more luxurious sinks including the Duostrainer. It is made in a variety of sizes for all size homes. For sink compartment at left end, order K-1520-LM. Specify size.

(PATENT APPLIED FOR)
Kohler Duostrainer can now be had on both apron and roll rim sinks.

Brockton K-1540-RM

IN many homes the budget is necessarily limited and a sink of simple proportions is desired. Like the 12" back sinks already shown, the Plymouth has all the quality of materials and workmanship that go into the larger Kohler sinks, but its less pretentious design and fewer accessories make it more economical. For corner installation, this sink, by offering as it does more protection to the walls with its high back, is very popular. This sink is made in three sizes—20x42", 20x52", and 22x52". For left corner installation, order K-1540-LM.

Dorchester K-1620-M

Where simplicity, or strict economy is the prime factor, this double drain board roll rim sink is utilized. The same care and materials go into its construction. Flint-gloss, the wonderful acid-resisting enamel, is available when desired. It has a mixing faucet with long swing spout, and may be equipped with a Duostrainer. The Dorchester is here shown with K-8680 faucet.

Dorchester K-1620-M

Berkshire K-1640-RM

Berkshire K-1640-RM

THE Berkshire is another roll rim sink of economical design. Like the Dorchester already shown, this sink may be equipped with the Kohler Duostrainer with but a slight increase in cost. It may be had in regular or Flint-gloss enamel. It is made in a great variety of sizes with different length sinks. These sizes are indicated below.

Sutton K-1720-C

Sutton K-1720-C

Another economical sink for small kitchens is this single compartment roll rim model. Like all Kohler sinks, it may be had in Flint-gloss and with chromium plated fittings. It is made in a great variety of sizes.

Flat Rim Sink K-1798 Duostrainer Equipped

The new K-1798 sink shown above will find wide appeal in many homes where a tiled-in kitchen sink is desired. Its flat rim and absence of back makes it ideal for placing in a setting of tile. In addition, both of its spacious compartments are eight inches deep, and both are equipped with Kohler Duostrainers.

Kohler Electric Clotheswasher Combination
Spring Green

The Laundry's New Colorful Washing Combination

A PLEASING note of color, the assurance of perfect washing action, convenient working conditions—that is what this new Kohler washing combination provides for you. The Kohler Clotheswasher described on the next page is illustrated above with the new free-standing laundry trays. You can work all around them and still you have all the convenience of stationary tubs. At the same time the entire combination may be had in any of the Kohler colors, including West Point Gray all of which are shown on this and succeeding pages. They help to make your laundry an attractive, pleasant place in which to work.

Kohler Electric Clotheswasher
Horizon Blue

The sturdy simple, and efficient Kohler Electric Clotheswasher K-2500

The Kohler Electric Clotheswasher

THE Kohler Electric Clotheswasher has taken the interest of women by storm. It is not only beautiful and simple in design, but its rapid, thorough, gentle washing is a revelation to those used to an ordinary washing machine. Collars and cuffs are the test of good washing; notice them as they come from the Kohler Clotheswasher, as fresh and clean as when new. The six vane agitator of new design is responsible; it whirls the water around with a double action both radial and rotating which is exclusive with this clotheswasher.

The tub, inside and out, is made of hard, smooth enamel, just like your bath tub. It is so smooth that the finest garment can be washed

The water is whirled with an aerating radial action

without danger. It is easy to keep clean and its glistening surface retains heat unusually long. The enamel is Flint-gloss, the new acid and alkali resisting enamel that will not roughen or discolor.

The mechanism is surprisingly simple, as a glance at the illustration will show. There are no exposed moving parts; there is nothing to get out of order. An occasional oiling is all the care that is required. The power travels on ball bearing shafts; the gears run in oil.

The gears run in oil, assuring noiseless, economical action

The action, smooth and quiet, the beauty and the efficiency of this new Kohler Clotheswasher, must be seen and demonstrated to be appreciated. Stop in at your plumber's or at a Kohler showroom and see one of these new machines in action.

The agitator is of new design with six large vanes

K-2670-A

The small drawing at the right shows how conveniently the Kohler Electric Clotheswasher (K-2500), with its swinging wringer, combines with the Kohler Free-standing Laundry Trays (K-2670-A), to make washing a simple one-two-three process.

K-2700-A

Kohler Laundry Trays

A MOST welcome fixture to the modern housewife is the new K-2670-A free-standing laundry tray combination. They are trays, like tubs, that stand in the middle of the floor. You can work all around them and still you have a stationary fixture. They are filled from regular sink faucets; they are emptied through drains the same as your sink. The interior is of smooth, hard enamel that is easy to clean and will remain so, especially if the enamel is Flint-gloss, which is not affected by washing compounds and will not roughen or discolor. The height is adjustable to the level of your washing machine.

The K-2700-A, with its eight inch back, is a convenient tray for installation along a wall. It is furnished with two compression faucets and a soap dish for each compartment, with painted adjustable legs and a sturdy hardwood wringer holder.

The K-2750-A is a series of trays without back for wall installation. The faucets and soap dish are in the tray itself. The trays may be purchased in single units so that as many as desired can be installed in a row.

Kohler Ware is Permanently Marked

ON every lavatory, bath tub, sink, and laundry tray manufactured by the Kohler Co., there is the pride mark, the words "KOHLER U.S.A." fused in clear yet unobtrusive blue letters into the enamel and under the glaze. This mark on your plumbing fixtures is a sign of unexcelled quality and of outstanding value. It is a guarantee to you that you have in your home fixtures of unimpeachable merit. It is a guard against possible misrepresentation. Be sure that your plumber points out to you the name "KOHLER" on every piece of ware that goes into your home. On Kohler closet bowls the letters "K OF K" appear with the same importance as the words for which they are substituted. The illustration above with a part of the enamel cut away shows how deep bedded and permanent this marking is. The same is the case on Kohler vitreous china.

On all Kohler brass fittings the same name is found as that which appears on the fixtures. The words "KOHLER U.S.A." are impressed into the brass itself before the plating is applied. These marks are all small and delicate. They are, however, indestructible. They are permanent marks that can not be removed or imitated.

In addition to the permanent marks, all Kohler ware, when delivered, has a small blue and gold sticker bearing the words "KOHLER OF KOHLER" conspicuously placed upon it. The letters "AR" are added when the enamel is Flint-gloss. These stickers, which are easily washed off, are for quick identification only, and should not be mistaken for the permanent marks in the ware itself.

A portion of an Octachrome sink faucet showing how Kohler brass is marked.

How to Order Kohler Plumbing Fixtures

The Job of the Master Plumber

AFTER you have studied this book or have been to a Kohler Showroom and have selected the fixtures you most desire, you are ready for the plumber. If you do not at present have contact with some particular plumber, select one, using all the care you would use in selecting a physician. The plumber in recommending, installing, and tending to your plumbing fixtures, plays an important part in administering to the health and comfort of you and your family, as well as in increasing the satisfaction which you gain from the fixtures.

When you have selected your plumber point out to him in this book the fixtures you desire. He will supply the fixtures either from his stock or by ordering them from a wholesaler. If you have been to a Kohler Showroom give your plumber a copy of the plumbing Specifications which were prepared there for you.

In any event, you should ask for a duplicate copy of the order so that you can make sure that the fixtures and fittings are the exact ones you desired. Be sure that both the name and the number are given. Check over with the plumber to assure yourself that the sizes are right. That the correct color is specified, if color is desired. That Flint-gloss acid-resisting enamel is called for on the proper fixtures. (Remember that all enameled fixtures are available in Flint-gloss enamel.) As for fittings, note whether nickel or chromium or gold plating is specified. If chromium, either with china or metal handles and escutcheons. Also specify if you wish the regular or Octachrome fittings.

If fixtures or fittings other than those shown in this book are desired, your plumber will be glad to show you his large Kohler catalog. From this book you can specify any article you desire to meet your various needs.

Kohler Plumbing Specification book which will be made up for you at a Kohler Showroom or by your architect or plumber. It shows illustrations and specifications of the fixtures you have selected for your home.

Kohler Electric Plants For Home and Industrial Use

Model 5A1—5 K.W., 110 Volt D. C.

IN keeping with its policy of supplying homes everywhere with modern living comforts, Kohler Co. has devised and produced a line of superior electric plants. In homes now without electricity, these sturdy plants will supply it abundantly for lighting purposes, for household appliances, for operating an automatic water system and thus making possible a modern plumbing installation.

So economical and efficient are these plants that they have also found wide usage in various industrial pursuits. They are used

for emergency and auxiliary purposes by theatres, hospitals, factories and fire departments.

At the present time the United States government is using more than 500 Kohler Electric Plants for lighting night air mail beacons. There are a great number of them also in use in many isolated lighthouses. For these tasks where life hangs in the balance, these sturdy and dependable plants are day in and day out proving their worth.

The Kohler Electric Plant is composed of a sturdy gasoline driven four cylinder engine to which an oversize compound wound generator is directly connected. City standard 110 volt current is supplied direct from the generator without the use of large storage batteries. Most models are entirely automatic in action. That is, they start when the first light or appliance is turned on, adjust themselves to varying loads, and stop when current is no longer required.

In order that every home, large or small, as well as many industrial needs can be supplied efficiently, Kohler Electric Plants are made in a number of sizes—1½, 2, 5, and 10 kilowatt plants being available. If more current is required, two or more plants may be installed in multiple. There are also special models that operate on natural or artificial gas, and models especially built for marine use, as well as those that generate 220 volt current. Recently an alternating current plant has been introduced, one that develops 5 KVA. Write for a complete catalog about Kohler of Kohler Electric Plants for domestic, industrial, and auxiliary uses.
